The Utah Museum of Natural History, is an active research institution located at the University of Utah, that cares for over 1.5 million objects. It provides unique natural history experiences to Utah residents and tourists through traveling and permanent exhibits, special events and other programs.

The new building rests on a series of terraces that step up the hill and lay along the contours of the site, with minimal disruption to the adjacent natural landscape. In addition, running and hiking trails in the immediate area are preserved and enhanced.
