

MulvannyG2 Architecture recently designed a high-tech business park in Shanghai which was completed this month. Located in a 2.5 million-square-foot ecological green area surrounded by mountains and water, the Park provides an appealing work oasis for a growing number of high-tech businesses in China.

The Shanghai Corporation Business Headquarters Park was constructed by developer Xingyue Investment Group. As one of Shanghai's largest and most advanced office parks, it is intended to be a magnet for international and local high-tech firms, similar to the Zhangjiang Semiconductor Research Park designed by MulvannyG2 last year, in Shanghai.

“As China strives to change its industrial base from manufacturing to high-tech, business parks provide a natural work environment sought after by local and international firms looking to establish headquarters in Shanghai.” said Ming Zhang, MulvannyG2's senior partner and design director for the project. “With Shanghai's crippling traffic, the Park is designed to be a natural oasis allowing business activities, conferences and exchanges to function away from the crowded inner-city.”
