

Woodbury University's new studio building, designed by Los Angeles-based Rios Clementi Hale Studios, completes the school's architecture facilities. Adding a publicly prominent new structure to the Burbank campus, the architects created a two-story building that comprises studio and critique space for approximately 200 students, as well as all-school exhibition space.

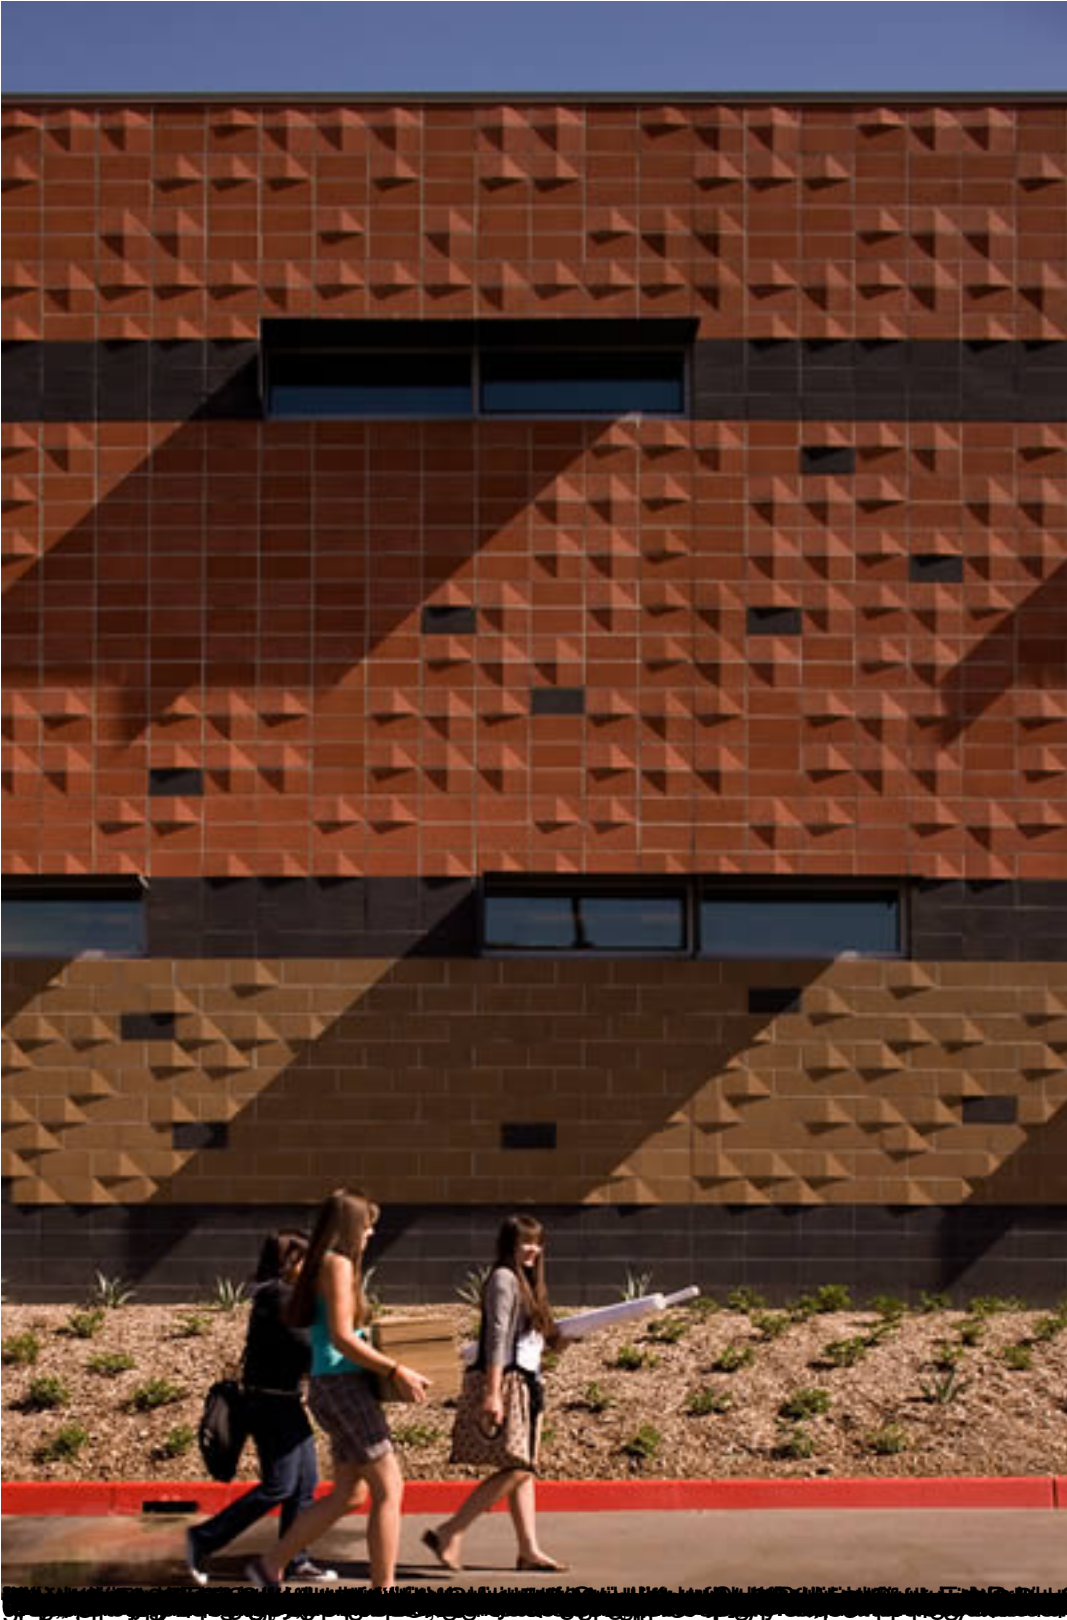

“We wanted to make a space the students could learn from,” says Jennifer Charles, project architect for Rios Clementi Hale Studios.

As an anchor for Woodbury's architecture program, the studio building complements the existing five separate one-story buildings on the southeast corner of the 22-acre campus. Rios Clementi Hale Studios designed the space with an open, flexible floor plan to accommodate future changes in the architecture school, teaching philosophies, or administrative needs.

“Our goal was to create a timeless, integrated campus building for the Woodbury School of Architecture,” says Mark Rios, FAIA, FASLA, founding principal of the multi-disciplinary architecture, design, landscape, and planning firm. “This required approaching the building as two distinct, but associated, masses: the architectural studies space and the multi-purpose, all-school space.”

The new building is part of a major \$27-million construction project being led by Swinerton Builders that includes a business complex with auditorium, residence hall, and a surface parking lot for more than 300 cars, in addition to the architecture studio. Famed architectural photographer Julius Shulman contributed substantially to the building fund.
