

We are glad to feature this dynamic new project by 3XN Architects. The Ørestad College is the latest ‘gymnasium’ (college or upper secondary school) in Copenhagen, built in the Danish capital’s development area; Ørestad.

The Ørestad College will be the first in Denmark to fulfil new educational visions regarding subjects, organisation and teaching systems.

Communication, interaction and synergy has been key issues. The project displays a visionary interpretation of openness and flexibility regarding team sizes, varying from the individual over groups to classes and assemblies, and reflects international tendencies aiming at achieving a more dynamic and life-like studying environment and introducing IT as a main tool. The intention is also to enforce the students' abilities gradually to take responsibility for own learning, being able to work in teams as well as working individually.
