

**The project is located within walking distance of downtown Culver City, a small municipality on the west side of Los Angeles, California.**

The 2-storey house is situated on a sub-standard, trapezoid-shaped 2,900 square foot (269 m2) lot and replaced an existing dilapidated house.

*Upper Plan*

The building is a prime example of modern architecture, featuring a combination of natural materials and large glass panels. The use of horizontal wooden slats is a key design element, providing a warm, organic feel to the structure. The large glass window not only allows for ample natural light but also creates a visual connection between the interior and the exterior environment.
