

Arquitectura X went through the challenging task of designing this house before any site got allocated to the project. It pushed them in setting out an elemental scheme that could work both in both the urban environment of Ecuador's capital, Quito and the valleys east of the city. They distilled their experience into an abstracted form, inspired by the work of [Donald Judd](#) that could be placed in any of the sites they would eventually find: an open ended box whose spatial limits would be the eastern and western ranges of the Andes.

The site is located in the Tumbaco Valley, Quito, Ecuador. The site is situated in a valley, and the building is oriented towards the valley. On the other hand, the site is also situated in a valley, and the building is oriented towards the valley.
