

Located on a valley to the east of Quito, within an area that enjoys a temperate climate all year round. It is quite a privileged setting due to the proximity of the local mountain ranges.

Unfortunately, the surrounding built context consists mainly of colonial style houses with a total disregard for the local topography, landscape or climate.

The site is relatively small, enclosed by three roads, with mandatory 5 m (15 ft) setback, a strong negative gradient and an unavoidable location due to road levels and accessibility to the garages.

the only, original building in the world that is built with a single material, concrete. The building is a masterpiece of modern architecture, designed by the architect Oscar Niemeyer. It is a prime example of the Brazilian modernist style, characterized by its clean lines and use of concrete and glass. The building is located in the heart of Rio de Janeiro, Brazil, and is a popular destination for tourists and architecture enthusiasts alike.

The design is a minimalist, clean-lined space that emphasizes light and air. The use of white and light wood creates a bright, airy atmosphere. The curved sofa and cylindrical coffee table are modern, functional pieces that complement the overall aesthetic. The high ceiling and balcony area add to the sense of openness and verticality.

[PIQUE- High Desert Pavilion, Central Oregon](#)

Designed by the talented architecture firm PIQUE, this single family residence rests on a prairie site in the high desert of Central Oregon and takes its design cues from the distant landscapes, the colors/textures/layers of the adjacent fields and the client's demand to feel as though they live outdoors.

BGP Arquitectura - Black House

Located on the hill above a small village at some 150km from Mexico City, the main feature of this retreat is its magnificent view. Its aim is to live with the landscape under a canopy with as few interior elements as possible.

Arquitectura X - X House, in the Tumbaco Valley, Quito, Ecuador

Arquitectura X went through the challenging task of designing this house before any site got allocated to the project. It pushed them in setting out an elemental scheme that could work both in both the urban environment of Ecuador's capital, Quito and the valleys east of the city.
