

Andrade Morettin Associates, Architects designed this summerhouse located at a short distance from the sea, in Itamambuca on the north coast of the State of São Paulo,

in Brazil. The environment is hot and humid and the landscape includes exuberant vegetation.

What Andrade Morettin architects wanted to create in the RR House was a big shelter. A sort of a “shell”, that protects from the intense sun and the frequent rain, without blocking the natural cross ventilation that cools the house.

All Photos by Nelson Kon
