

Sustainable design for future development

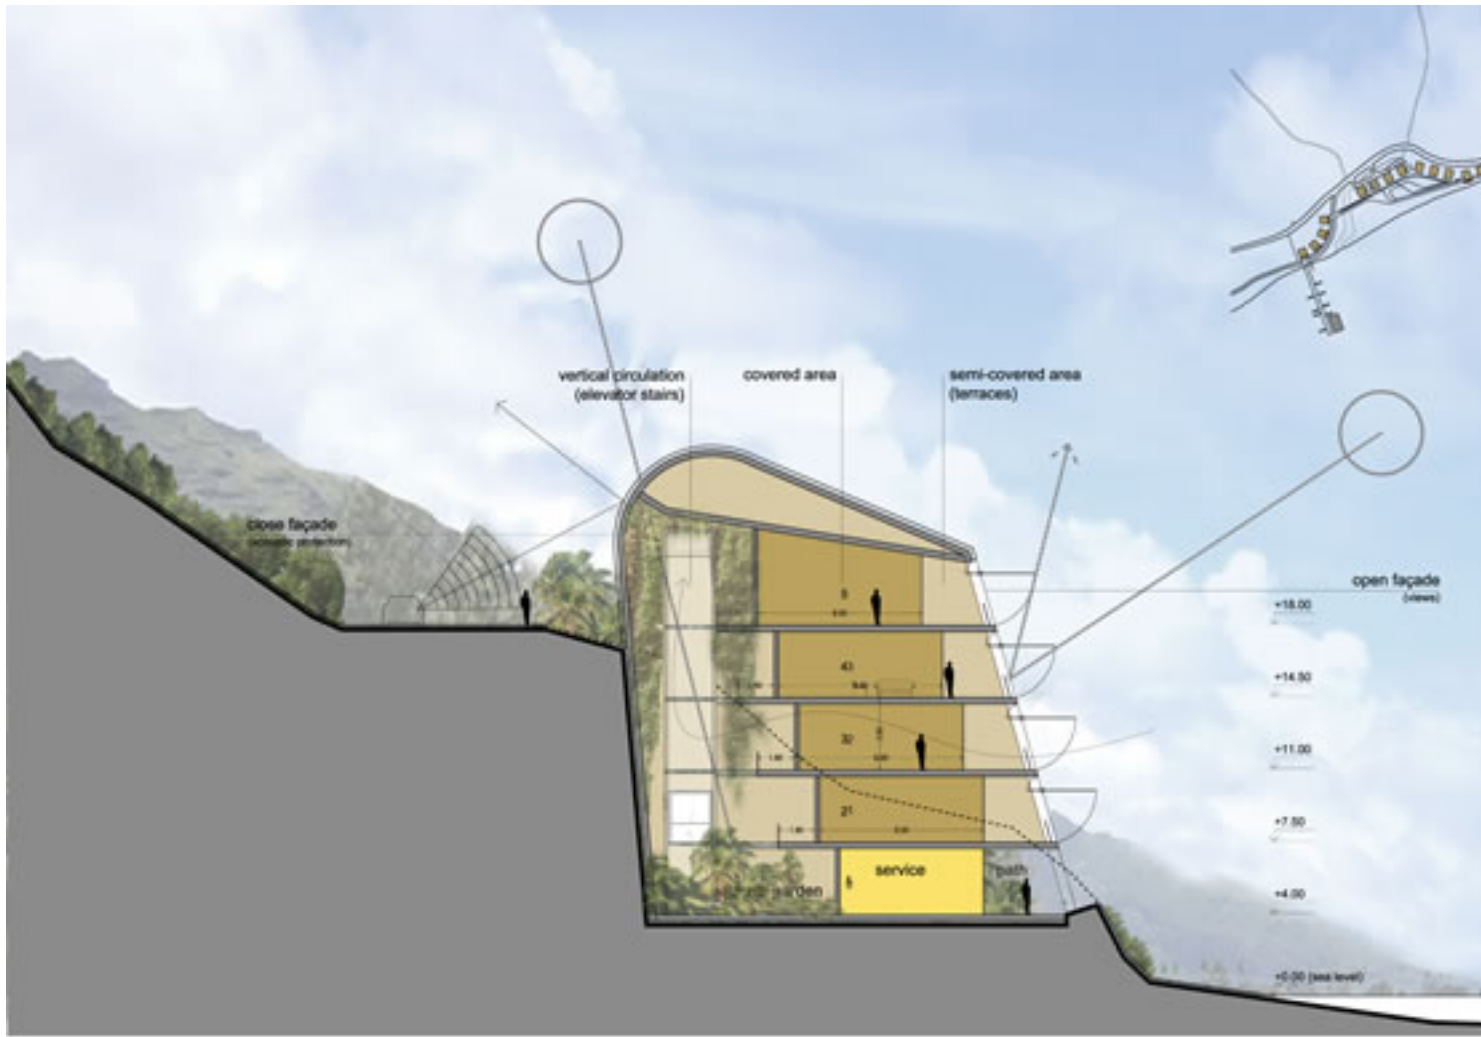

The development of an exclusive residential resort of 22.000m² is situated along Mero Beach on the west coast of the Commonwealth of Dominica. Mero Beach is one of the most important beaches on the island and has specific and relevant social and ecological values. Both those social and ecological characteristics are related to the fragile cultural, economical and natural balance whose protection is paramount. The design of this resort intends to protect that balance and promote a sustainable development approach.
