

The project is a great example of space optimization. It proves that the quality of space

doesn't need to suffer through confinement. Squeezed in a small and narrow site, space and natural light becomes precious resources, what the architect describes as 'Architectural Values'.

The vertical circulation doubles up as a living area. Natural light is collected through skylights and carefully channeled vertically to illuminate the different spaces. Narrow areas around the edges of the houses are utilized for landscape and help to compensate for the lack of exposure to external view.

Verticality of the garden makes it more comfortable to live in the house for a long time. It is a good idea to use the elements of the garden as a

A view to from the outside gives a clear idea of the dimension of the project.
